4.25 (RHH)

RECOMMENDATION
Follow

REPORT TYPE
Sample only

TOOL GRADES 20-80 SCALE

TOOL	PRESENT	FUTURE
HIT	40	55
POWER	35	50
RUN	55	55
ARM	60	60
FIELD	55	60

50

Overall Future Potential. OFP is a judgment of the player's likely role, not the average of the tool grades. The bat has to develop, but the defense and arm give this player a viable everyday-shortstop path at the future grades shown.

STRENGTHS

- Plus arm strength with an accurate, repeatable throw from the left side of the infield.
- Smooth, balanced actions and good range for the position.
- Above-average run grade supported by the 4.25 home-to-first time (historical benchmark: between 50 and 60 for a right-handed hitter).

CONCERNS

- Bat path is short but the swing lacks strength, so contact is often soft.
- Limited impact against better velocity in the looks observed.
- Needs to add strength before power can play above a 50.

PROJECTION

Frame and age suggest room to add strength, which is the main driver of the move from present to future grades for hit and power. Speed and arm are expected to hold. Defense is projected to improve with reps and strength.

RECOMMENDATION

FOLLOW. Schedule additional looks to see whether the bat is adding strength and whether contact quality improves against higher-level pitching.

Illustrative sample for demonstration only. Eli Sample is a fictional player. All names, schools, events and grades are invented. True Grade is MBSA Group's own evaluation framework.
